

Acclaim Selects Solid State Networks For 2Moons Launch

Game Publisher Deploys Peer-Assisted Solution for Release of Highly Anticipated MMORPG

Tempe, Az. Sept. 18, 2007 Solid State Networks, a leading developer of high-performance, low-cost, distributed content delivery solutions, today announced a significant addition to its growing focus in the gaming industry. Online game publisher, Acclaim Games, has licensed the Solid Axis suite, the company's state-of-the-art peer-assisted delivery technology, for the launch of the highly anticipated 2Moons' Free to Play MMORPG. With all the tremendous hype surrounding the release of 2Moons, the large volume of expected simultaneous game downloads could have potentially overwhelmed the delivery system and magnified costs significantly. Solid State Networks' innovative technology helped Acclaim successfully deliver an astonishing 500,000 downloads of the 2Moons game within the first month of release, resulting in the biggest opening launch ever for an Acclaim online game title.

"Using Solid State's technology, we have achieved a combination of faster download speeds during peak demand and lower per-game delivery costs," said Howard Marks, CEO of Acclaim Games. "We are extremely pleased with these results and will be expanding use of this technology to all of our game titles."

In support of the launch of 2Moons, Solid State deployed its software solution as an overlay to content delivery network infrastructure provided by BandCon, made possible through a partnership announced by the companies last month. Every player acquiring the game was assured reliable delivery by connecting to one of multiple servers deployed in North America and Europe. Concurrently, each player also temporarily participated in a closed P2P network during the transfer process. In this manner, each player receives pieces of each file from many different sources, speeding download times, and reducing the dependence on the provisioned delivery infrastructure. During the launch of 2Moons, over 50 percent of the data was transferred among the peer network, while some users reported transfer rates as high as 1000KB/sec.

"We are both honored and thrilled that Acclaim has entrusted us with this critical component of their business," said Rick Buonincontri, founder and CEO of Solid State Networks. "As early adopters of peer-assisted technology, they are demonstrating that they continue to be thought of as leaders in the online video game industry."

About Acclaim Games

Based in Beverly Hills, California, Acclaim Games is a revolutionary company with over 3 million registered players worldwide. CEO Howard Marks, a cofounder of Activision, has established Acclaim as one of America's top online game brands. Today, Acclaim Games offers only the finest online games with a focus on accessibility, playability and most importantly, fun. Acclaim's free massively multiplayer games include BOTS!! About Solid State Networks

Solid State Networks is a leading developer of high performance distributed content delivery solutions and the first to combine reliability and QoS available with HTTP with the economic and performance advantages of the BitTorrent Protocol. Solid State's offerings are ideal for the distribution of high-demand, large digital objects, including PC and console video games, high-resolution video including feature films and television programs, music and software programs.

Over the past year, Solid State Networks has been steadily gaining recognition within the gaming industry as a highly innovative company with reliable technology and solutions. In addition to Acclaim Games, Solid State has previously announced Wizards of the Coast, PlayWhat.com and Tulga Games as clients. Additionally, this past spring Solid State was chosen by AlwaysOn as one of the OnHollywood 100, based on a set of five criteria: innovation, market potential, customer adoption, media buzz and investor value creation.

BitTorrent is a trademark or registered trademark of BitTorrent, Inc., used under license.

The company's Web address is www.SolidStateNetworks.com.

About BandCon

BandCon is the network provider for large content Web sites, providing the most flexible and scalable complete network solutions for IP transit, transport, colocation, CDN and peering. BandCon's Content Delivery System' is specifically designed to provide delivery mechanisms that coincide with sites immediate and ever changing needs. As a site matures the delivery methods will vary between transit, CDN, transport and peering. BandCon synergizes these methods into a cohesive group of products maximizing economics and performance. BandCon provides its Content Delivery System for MySpace, Internap, Revver, Vonage, Nine Systems and Skype.
